Three Simple Steps

to Achieve TJC Compliance

In one robust yet simple-to-use solution, you can achieve radiation dose compliance for CT and fluoroscopy in three easy steps.
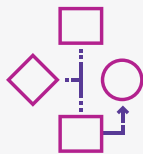

1

Rapid Implementation

- Connect and install the Imalogix Edge Server in 30 minutes or less
- Secure a connection between Imalogix and your organization with two VPN connections
- The Imalogix Edge Server begins to collect and send data from any vendor designated modality immediately

2

Automatic Protocol Mapping

- Unlike other solutions, the Imalogix solution automatically normalizes, maps and organizes protocols to RadLex terminology
- Protocol updates or net new protocols are automatically mapped once solution is up and running

3

Set Thresholds

- Establish dose ranges and alert levels and designate who on your staff is responsible for responding to any alerts
- Optional built-in support from an expert medical physicist can consult to establish dose ranges and alert levels while providing support to monitor and respond to any alerts

Optimization

After initial set up, you will now have the necessary transparency into how radiology is being delivered across your enterprise. Machine intelligence proactively identifies outliers, root cause and highlights where and how you can make changes to drive continuous performance improvement. Intelligent dashboards bring the collective best practices of our network direct to your fingertips. Decision-making moves to proactive and predictive to lower risk, drive growth and evolve the standard of care—all so you can deliver consistent high-quality, safe and effective care for every patient.
